Thursday, April 23, 2026
8:00-8:45am Registration

Clinical Sessions
King-Queen Ballroom

8:30am-12:00pm

The Clinical Architect: Designing the Multi-Device Ecosystem Under SB 101

With the passage of Georgia Senate Bill 101, clinicians are no longer constrained to a single “do-everything” prosthesis every three years. This 4-hour immersive course reframes the practitioner’s role—not as a component selector or package seller—but as a Clinical Architect, responsible for designing a resilient, future-proof Multi-Device Ecosystem that ensures a patient’s mobility is never interrupted, regardless of activity, environment, or authorization timing. Grounded in Össur’s Systemic Clinical Model for Prosthetics, this course delivers a practical, insurer-savvy playbook for thriving under SB 101—without burning out in the authorization process.

12:00-1:00pm Lunch

1:00-4:00pm

The Athlete’s Corner: Choosing the Right Ottobock Running Components

Lucas Crisanti MS, CPO, Clinical Specialist, Global Running Clinic Coach
This course is designed for practitioners interested in learning about the various Ottobock components designed for running as well as other clinical considerations concerning a running prosthesis. The course will cover a technical overview of running specific feet and knees and also discuss which combo of liners would pair best with a running prosthesis. Attendees will receive hands-on training with a live patient model which includes training the end user on how to properly use a running prosthesis.

4:00-5:00pm

C-Brace overview – Why a Microprocessor vs. Conventional KAFO

Ottobock, Ron Wilkinson, CPO
